

GATEKEEPER SCRIPTS

Aviation Robotics Company — Outbound Motion

Companion to GTM Strategy & Cadence Template — 2025 Engagement

Note: Recreated from memory as a representative work sample. Company and contact names are illustrative. Scripts start drafts — personalize bracketed [] fields per account.

Purpose & Approach

Industrial buyers in this space are screened by three types of gatekeepers before a rep reaches a decision-maker: front-desk/EA screeners, the technical or procurement contact themselves (who often acts as an informal gatekeeper to their own leadership), and voicemail. Every script below follows the same principle: lead with something of immediate value, never open with a time request. Value-first openers consistently out-performed direct scheduling requests in pass-through rate during the pilot cohort referenced in the GTM Strategy document.

1. Front Desk / Executive Assistant Scripts

Used when a call is routed through a general line or an EA before reaching any named contact.

Opener — general line

"Hi, this is [Your Name] with [Company]. I'm hoping to connect with whoever leads to tooling or maintenance operations for your production line — do you know who that would be?"

Opener — named contact, EA screening

"Hi, this is [Your Name] calling for [Contact Name] — I sent over a short benchmark on tooling-wear rates last week and wanted to follow up briefly. Is [Contact Name] available, or is there a better time to reach them?"

If asked "what is this regarding"

"Of course — I work with manufacturing teams on reducing unplanned downtime from tooling wear and wanted to share a quick reference point that's relevant to their line. Happy to keep it brief."

If told to email instead

"Happy to do that — could you confirm the best email for [Contact Name], and is there a specific format or subject line your team prefers for vendor outreach?"

2. Technical Entry — Opening Scripts

Shop supervisor / maintenance lead. Goal: validate fit, surface pain points. See Cadence Template, Technical Entry tab, for full sequence.

Cold opener

"Hi [First Name], this is [Your Name] with [Company]. I'll keep this short — I sent over a short benchmark on defastening failure rates for lines comparable to yours. Is unplanned tooling downtime something your team tracks closely?"

Warm follow-up (after email touch)

"Hi [First Name], following up on the benchmark data I sent — did it look relevant to how your team handles fastener removal, or is that mostly outsourced right now?"

Handling "we're not looking right now"

"Totally understand — there is no pressure at all. Would it be alright if I sent over one more data point in a few weeks, in case the timing shifts?"

3. Procurement Entry — Opening Scripts

Sourcing / procurement analyst. Goal: Understand incumbent vendor setup and RFP timing. See Cadence Template, Procurement Entry tab, for full sequence.

Cold opener

"Hi [First Name], this is [Your Name] with [Company]. I sent over a short AS9100/ISO 9001 vendor checklist last week — wanted to see if it was useful for how your team evaluates tooling and maintenance vendors."

Asking about renewal timing

"No need to get into specifics, but I'm curious — does your team run a formal RFP cycle for vendors like us, or is renewal more relationship-based?"

Handling "we already have a vendor"

"That's helpful context — would it be useful to stay in touch for when that contract comes up for renewal, or if requirements change?"

4. Executive Entry — Opening Scripts

VP / Director level. Reserved for a warm introduction or a confirmed trigger event — never a cold open. See GTM Strategy, Section 3.

Warm introduction opener

"Hi [First Name], [Referral Name] suggested I reach out — they mentioned your team might be evaluating tooling reliability as part of [initiative]. Happy to share a quick point of view if useful."

Trigger-event opener

"Hi [First Name], congratulations on [contract award / expansion] — teams usually see a jump in tooling wear during ramp-up, so wanted to flag a resource in case the timing's useful."

Redirecting to the right contact

"Totally understand if this isn't the right level of detail for you — would it be more useful if I connected directly with someone on your ops or procurement team instead?"

5. Common Objections — Pattern-Level Responses

Full call recordings tagged by objection theme are maintained in the internal training library (see GTM Strategy, Section 6). The patterns below are representative, not exhaustive.

- "Send me something in writing" → treat as a real next step, not a brush-off: send the resource same day, then follow up referencing it specifically rather than generically.
- "We're happy with our current vendor" → acknowledge, then ask a low-pressure question about renewal timing or compliance requirements rather than challenging the incumbent directly.
- "Not a priority right now" → validate the timing concern, offer to check back at a defined future point rather than pushing for an immediate meeting.
- Silence after multiple touches → shift to a break-up message that closes the loop respectfully and leaves the door open, rather than escalating touch frequency.

Usage Notes

- Every script is a starting draft. Personalize bracketed fields using account research before calling — AI-assisted research can speed this up (see GTM Strategy, Section 5) but call delivery itself stays rep-led.
- Tone matters more than word-for-word delivery. Reps are trained to internalize the value-first principle, not to read scripts verbatim.
- Pair with the Certification Checklist to confirm a rep can adapt these scripts naturally before running the motion independently.
